

Instructions

- 1. Read the IAQ
 Backgrounder and
 the Background
 Information for
 this checklist.
- 2. Keep the
 Background
 Information and
 make a copy of
 this checklist for
 each ventilation
 unit in your school,
 as well as a
 copy for future
 reference.
- 3. Complete the Checklist.
 - Check the "yes,"
 "no," or
 "not applicable"
 box beside each
 item. (A "no"
 response
 requires further
 attention.)
 - Make comments in the "Notes" section as necessary.
- Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

ACTIVITY 1: OBSTRUCTIONS 1c. Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers	Na	me: David Paul		
Room or Area: Signature:	Scl	hool: Benjamin Franklin Elementary School		
Room or Area: Signature:	Un	uit Ventilator/AHU No:		
1a. Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan) 1b. Ensured that the ventilation system was on and operating in "occupied" mode ACTIVITY 1: OBSTRUCTIONS 1c. Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers 1d. Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake) ACTIVITY 2: POLLUTANT SOURCES 1e. Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas) 1f. Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from air-conditioning cooling towers) 1g. Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe) ACTIVITY 3: AIRFLOW 1h. Obtained chemical smoke (or a small piece of tissue paper or light plastic). 2. SYSTEM CLEANLINESS ACTIVITY 4: AIR FILTERS 2a. Replaced filters per maintenance schedule 2b. Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream) 2c. Vacuumed filter areas before installing new filters 2d. Confirmed proper fit of filters to prevent air from bypassing (flowing)	Ro	om or Area: All Date Completed: 4/3/2029		
example, a fire escape floor plan) 1b. Ensured that the ventilation system was on and operating in "occupied" mode ACTIVITY 1: OBSTRUCTIONS 1c. Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers 1d. Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake) ACTIVITY 2: POLLUTANT SOURCES 1e. Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas) 1f. Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from air-conditioning cooling towers) 1g. Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe) ACTIVITY 3: AIRFLOW 1h. Obtained chemical smoke (or a small piece of tissue paper or light plastic) 2. SYSTEM CLEANLINESS ACTIVITY 4: AIR FILTERS 2a. Replaced filters per maintenance schedule 2b. Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream) 2c. Vacuumed filter areas before installing new filters 2d. Confirmed proper fit of filters to prevent air from bypassing (flowing	1.	OUTDOOR AIR INTAKES

AC 2f. 2g.	SYSTEM CLEANLINESS (continued) TIVITY 5: DRAIN PANS Ensured that drain pans slant toward the drain (to prevent water from accumulating) Cleaned drain pans Checked drain pans for mold and mildew	w/,		N/A				
AC 2i.	TIVITY 6: COILS Ensured that heating and cooling coils are clean	d						
2j.	TIVITY 7: AIR-HANDLING UNITS, UNIT VENTILATORS Ensured that the interior of air-handling unit(s) or unit ventilator (air-mixing chamber and fan blades) is clean Ensured that ducts are clean		00	0				
21.	TIVITY 8: MECHANICAL ROOMS Checked mechanical room for unsanitary conditions, leaks, and spills Ensured that mechanical rooms and air-mixing chambers are free of trash, chemical products, and supplies		<u> </u>	<u> </u>				
3.	CONTROLS FOR OUTDOOR AIR SUPPLY							
3a. 3b.	Ensured that air dampers are at least partially open (minimum position) Ensured that minimum position provides adequate outdoor air for occupants			<u> </u>				
	TIVITY 9: CONTROLS INFORMATION Obtained and reviewed all design inside/outside temperature and humidity requirements, controls specifications, as-built mechanical drawings, and controls operations manuals (often uniquely designed)							
3d. 3e.	TIVITY 10: CLOCKS, TIMERS, SWITCHES Turned summer-winter switches to the correct position Set time clocks appropriately Ensured that settings fit the actual schedule of building use (including night/weekend use)			0				
3g. 3h.	Ensured appropriate system pressure by testing line pressure at both the occupied (day) setting and the unoccupied (night) setting	<u> </u>	0		These refer	ques to p	tions neuma	tie
3j.	Set the line pressure at each thermostat and damper actuator at the proper level (no leakage or obstructions)		a		diade	al	0,	
3k. 3l.	Ensured that the outdoor air damper is visible for inspection	d	0		/ "			
	TE: It is necessary to ensure that the damper is operating properly and withing to continue. Zk, to the extent that can ur	n the i			inspe	2 of 5 extend	/	

	3.	CONTROLS FOR OUTDOOR AIR SUPPLY (continued)			
	3n.	Checked that the outdoor air damper fully closes within a few minutes of shutting off appropriate air handler		No	N/A
	3o.	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on	/		
	3р.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F		J / [
	3q.	If in cooling mode, checked that the outdoor air damper goes to its minimur position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F.	n	, 	
	3r.	If the outdoor air damper does not move, confirmed the following items: • The damper actuator links to the damper shaft, and any linkage set		_	
		 screws or bolts are tight		0 0	
		location, calibrated correctly)			
		ceed to Activities 13–16 if the damper seems to be operating properly.			
	3s.	TIVITY 13: FREEZE STATS Disconnected power to controls (for automatic reset only) to test continuity across terminals	a /	, 	
	OR 3t	Confirmed (if applicable) that depressing the manual reset button (usually			
	Ji.	red) trips the freeze stat (clicking sound indicates freeze stat was tripped)			
	3u.	Assessed the feasibility of replacing all manual reset freeze-stats with automatic reset freeze-stats		_	10/
	clos	TE: HVAC systems with water coils need protection from the cold. The freeze- e the outdoor air damper and disconnect the supply air when tripped. The types is 35°F to 42°F.			
		FIVITY 14: MIXED AIR THERMOSTATS			
	3 v.	Ensured that the mixed air stat for heating mode is set no higher than 65°F			¥
		Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting			D
		FIVITY 15: ECONOMIZERS Confirmed proper economizer settings based on design specifications or			
		local practices			D.
		TE: The dry-bulb is typically set at 65°F or lower.		_	1/
	3z.	Checked that sensor on the economizer is shielded from direct sunlight Ensured that dampers operate properly (for outside air, return air,			
j		exhaust/relief air, and recirculated air), per the design specifications "E: Economizers use varying amounts of cool outdoor air to assist with the c		_	u
i	load Dry-	of the room or rooms. There are two types of economizers, dry-bulb and enti- bulb economizers vary the amount of outdoor air based on outdoor tempera	halpy ture,	·.	Je.
Sp	1	enthalps economizers vary the amount of outdoor air based on outdoor temphimidity level. CTC" building control control settlers. emperature and peremeters. f damper failures occur, repairs are			
7	T	emperation constructions.	PI	110	de ASAY
31.	/-	t damper failures occur, repairs an	- //	144	

	Ensured that all fans (supply fans and associated return or relief fans) that move outside air indoors continuously operate during occupied hours (even when room thermostat is satisfied)	∕No □	N/A	
	TE: If fan shuts off when the thermostat is satisfied, adjust control cycle as neces tre sufficient outdoor air supply.	sary .	to	
4.	AIR DISTRIBUTION			
4a.	Ensured that supply and return air pathways in the existing ventilation system perform as required	_		
	between rooms and corridors are functioning	□ with a	!	
4c.	Made sure every occupied space has supply of outdoor air (mechanical system or operable windows)	, ₀	0	
	E: If outlets have been blocked intentionally to correct drafts or discomfort, invector the cause of the discomfort and reopen the vents.	estiga	te	
	Modified the HVAC system to supply outside air to areas without an outdoor air supply			
	Modified existing HVAC systems to incorporate any room or zone layout and population changes		۵	
_	Moved all barriers (for example, room dividers, large free-standing blackboards or displays, bookshelves) that could block movement of air in the room, especially those blocking air vents		1	
4h.	Ensured that unit ventilators are quiet enough to accommodate classroom activities	,		
4i.	Ensured that classrooms are free of uncomfortable drafts produced by air from supply terminals	, 		
AC1	TIVITY 18: PRESSURIZATION IN BUILDINGS			
mair	E: To prevent infiltration of outdoor pollutants, the ventilation system is designe tain positive pressurization in the building. Therefore, ensure that the system, in exhaust fans, is operating on the "occupied" cycle when doing this activity.		ng	
	Ensured that air flows out of the building (using chemical smoke) through windows, doors, or other cracks and holes in exterior wall (for example, floor joints, pipe openings)	, 		
5. E	XHAUST SYSTEMS			
ACT	CIVITY 19: EXHAUST FAN OPERATION Checked (using chemical smoke) that air flows into exhaust fan grille(s)	,		
If far	 as are running but air is not flowing toward the exhaust intake, check for the foli Inoperable dampers Obstructed, leaky, or disconnected ductwork Undersized or improperly installed fan 	owing		
4	· Broken fan belt 16. Ductless split DIC was added 15. Tissur used in place of smok	でと	SCU	orici tioby'
14	J. Tissur used in place of smob	C		4 of 5

5. EXHAUST SYSTEMS (continued)

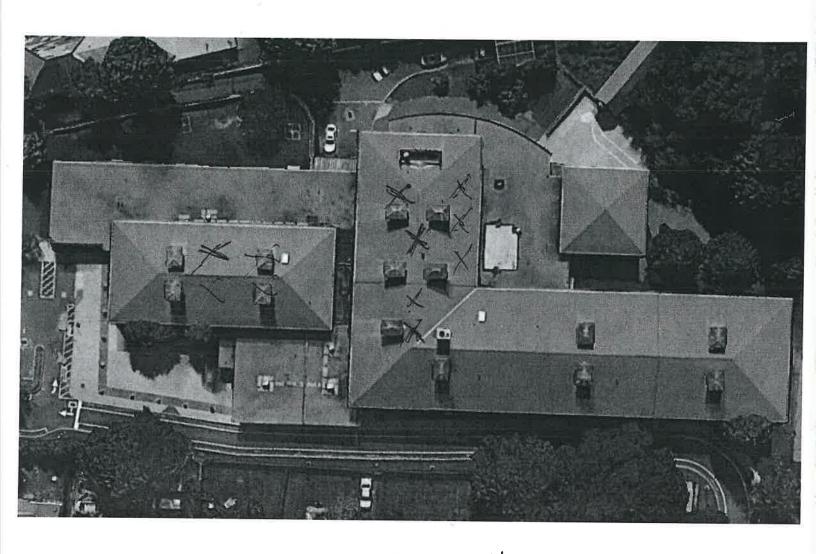

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).								
5b. Checked (using chemical smoke) that air is drawn into the room from adjacent spaces								
Stand outside the room with the door slightly open while checking airflow high and low in the door opening (see "How to Measure Airflow").								
5c. Ensured that air is flowing toward the exhaust intake								
ACTIVITY 21: EXHAUST DUCTWORK 5d. Checked that the exhaust ductwork downstream of the exhaust fan (which is under positive pressure) is sealed and in good condition								
6. QUANTITY OF OUTDOOR AIR								
ACTIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATIONS								
NOTE: Refer to "How to Measure Airflow" for techniques.								
 6a. Measured the quantity of outdoor air supplied (22a) to each ventilation unit 6b. Calculated the number of occupants served (22b) by the ventilation unit 								
under consideration								
6c. Divided outdoor air supply (22a) by the number of occupants (22b) to determine the existing quantity of outdoor air supply per person (22c)								
ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTITIES								
6d. Compared the existing outdoor air per person (22c) to the recommended levels in Table 1								
6e. Corrected problems with ventilation units that supplied inadequate quantities of outdoor air to ensure that outdoor air quantities (22c) meet the recommended levels in Table 1								

NOTES

(56. Tissue used in place of smoke 25c.

Ga-C. As part of the IAQ plang the building NVAC system is scheduled to be commissioned.

20 cations of 11 air handling units are mulked on the root.
